

Chiro Plus

support system

Individual pocket spring system - consists of a grid of springs, each in their own fabric pocket. As springs are not wired together, each spring is able to work more or less independently so the weight on one spring does not affect the springs around it, thus minimising partner disturbance.

Side supports - foam box construction, whereby spring units are encased in foam to allow for a firmer seating area around the mattress perimeter, and to prevent roll-off.

comfort layers

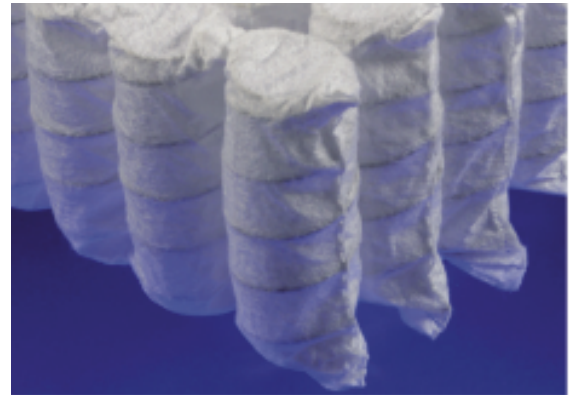

Fabric - non-allergenic and made without the use of CFCs.
